1. Venmo – U.S. Peer-to-Peer Payment App

What it does:
• Mobile app for sending and receiving money between people (e.g., split bills, pay friends).

How it works:
• Users link bank accounts or cards
• You can send money to someone using their phone/email
• Has social features (like emojis and public feeds) almost like *social payments*.

Revenue:
• Mostly free for bank transfers
• Fees for credit card payments and instant withdrawals.

Region/language:
• U.S. only (both sender and receiver must be in the U.S.).

Good for: *Quick person-to-person payments*
Not good for: *Crypto exchange or large business payments*

2. Zelle – U.S. Bank-Based Transfers

What it does:
• A service built into many U.S. bank apps that lets you transfer money directly between bank accounts.

How it works:
• No app needed if your bank supports it just use your bank app
• Transfers are usually *instant* and go directly into the recipient's bank account.

Fees:
• Usually no fees from Zelle itself
• It *doesn't hold a balance* it just moves money between accounts.

Important:
• Once a payment is sent, it often *can't be canceled*, which can be risky if the other person doesn't deliver goods.

Good for: *Fast bank-to-bank transfers in the U.S.*
Not good for: *International transfers or crypto*

3. Nubank – Latin American Digital Bank

What it does:
• A full digital bank accounts, debit/credit cards, loans, rewards, and financial services — all in one app.

Where it operates:
• Brazil, Mexico, Colombia (and expanding).

Services include:
• No-fee digital accounts
• Mastercard credit cards
• Personal loans and some investment products
• Real-time transaction tracking inside the app.

Business model:
• Earns through interest on loans, fees on premium services, and financial products — like a real bank but digital-first.

Good for: *Full banking experience without physical branches*
Not a simple P2P platform just for payments like Venmo/Zelle

4. Revolut – Global Digital Bank & Fintech App

What it does:
• A *global financial app* offering digital bank accounts, currency exchange, stock and crypto trading, multi-currency wallets, and payments.

Key features:
• International money transfers
• Bank accounts in many countries
• Debit and credit cards linked to the app
• Crypto exchange *inside the app* (but not a separate crypto wallet).

Revenue model:
• Fees from premium subscriptions
• Fees for some transfers and currency exchange
• Exchange spreads when converting money.

Good for: *People who travel, hold multiple currencies, or want many financial tools in one app*
Not just simple P2P it's broader

5. Fidex

What it does:
• A platform that lets users sell **USDT (crypto)** for **Naira** *without a complicated buyer–seller matching system* compared to traditional P2P.
• Focused on ease of use and speed for crypto users in Nigeria.

How it's different from the others:
• Not just payments *crypto conversion to local currency*
• Focused on *Nigeria's market need*
• Uses a **simplified, direct exchange** rather than bank transfers.

Business model you designed:
• Takes a small fee from every transaction

Good for: *Crypto users in Nigeria who want simple and fast conversion*
Not directly competing with Venmo/Zelle, which are bank payment tools, or with full banks like Nubank or Revolut.

SIMPLE COMPARISON CHART

Platform	Main Service	Where	Key Strength
Venmo	Social P2P payments	U.S.	Easy friend-to-friend transfers
Zelle	Bank-to-bank instant transfer	U.S.	Fast bank payments
Nubank	Full digital banking	LATAM	Banking without branches
Revolut	Global digital bank + multi-tools	Worldwide	Multi currency + investing + payments
Fidex	Crypto to local currency exchange	Nigeria	Simple USDT → Naira conversion
